

How to Measure your Cushion for New Latex Foam

Use these instructions when replacing your old upholstery foam with natural or organic latex foam.

Visit NaturalUpholstery.com to order, and watch the companion video “How to Measure for Latex Foam”.

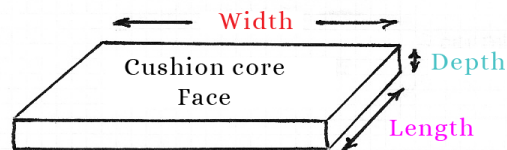

Option 1: Measure the foam directly. Remove the foam from the cushion cover, steam if necessary to bring the foam back to its original dimensions. If the corners and edges are distorted beyond steam-repair, you will not get an accurate measurement and it is recommended that you use option 2 instead.

Example 1: if your foam measures 22 x 22 x 5 - order this exact size of new foam.

Option 2: Measure width & length across face of cushion from seam to seam, then add 1/2” to each dimension. Measure depth (thickness) from seam to seam and add 1/2”

Example 2: 21 x 21 x 4 cushion measurements - add 1/2” to each dimension: order 21.5 x 21.5 x 4.5 new foam

Refer to the diagram below as a guide to measure your cushion dimensions.

Width = longest dimension of face
Length = shortest dimension of face
Depth = thickness of cushion core

Measure the dimensions of your cushion, record them here and use them as a handy reference when purchasing your foam.

width = _____, **length** = _____, **depth** = _____ (all measurements are inches)
